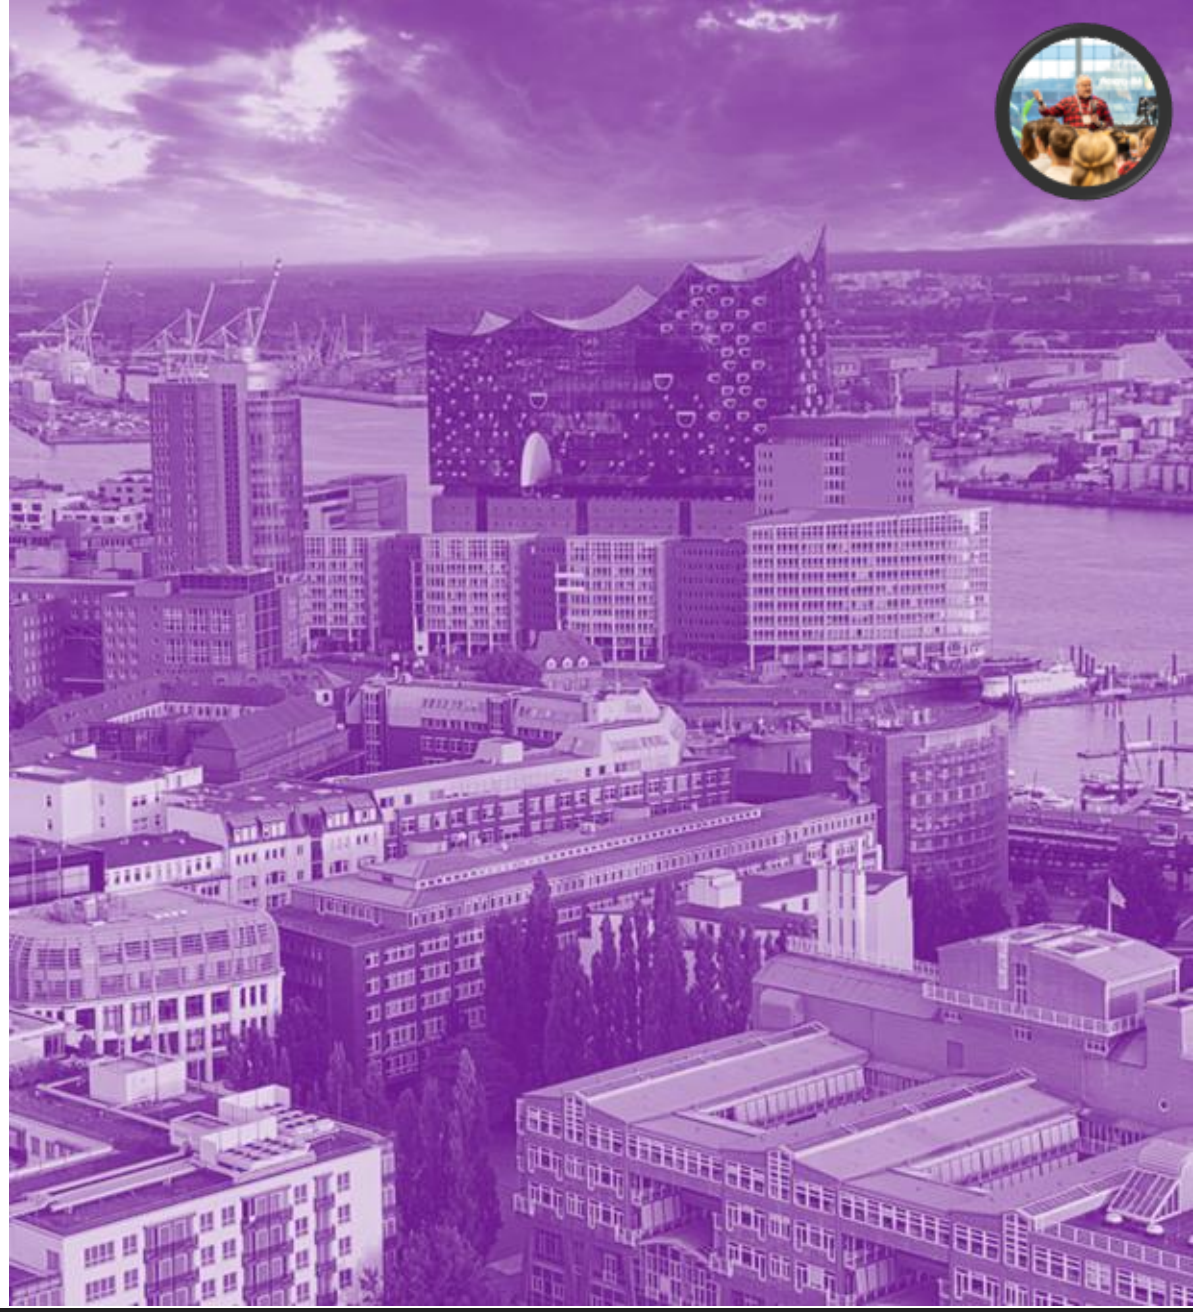
Agenda

- Introduction
- Why multilingual matters
- Configuring Dataverse & Power Pages for multiple languages
- Multilingual forms, lists & dynamic content
- AI powered translation with context engineering
- Key takeaways

Introduction



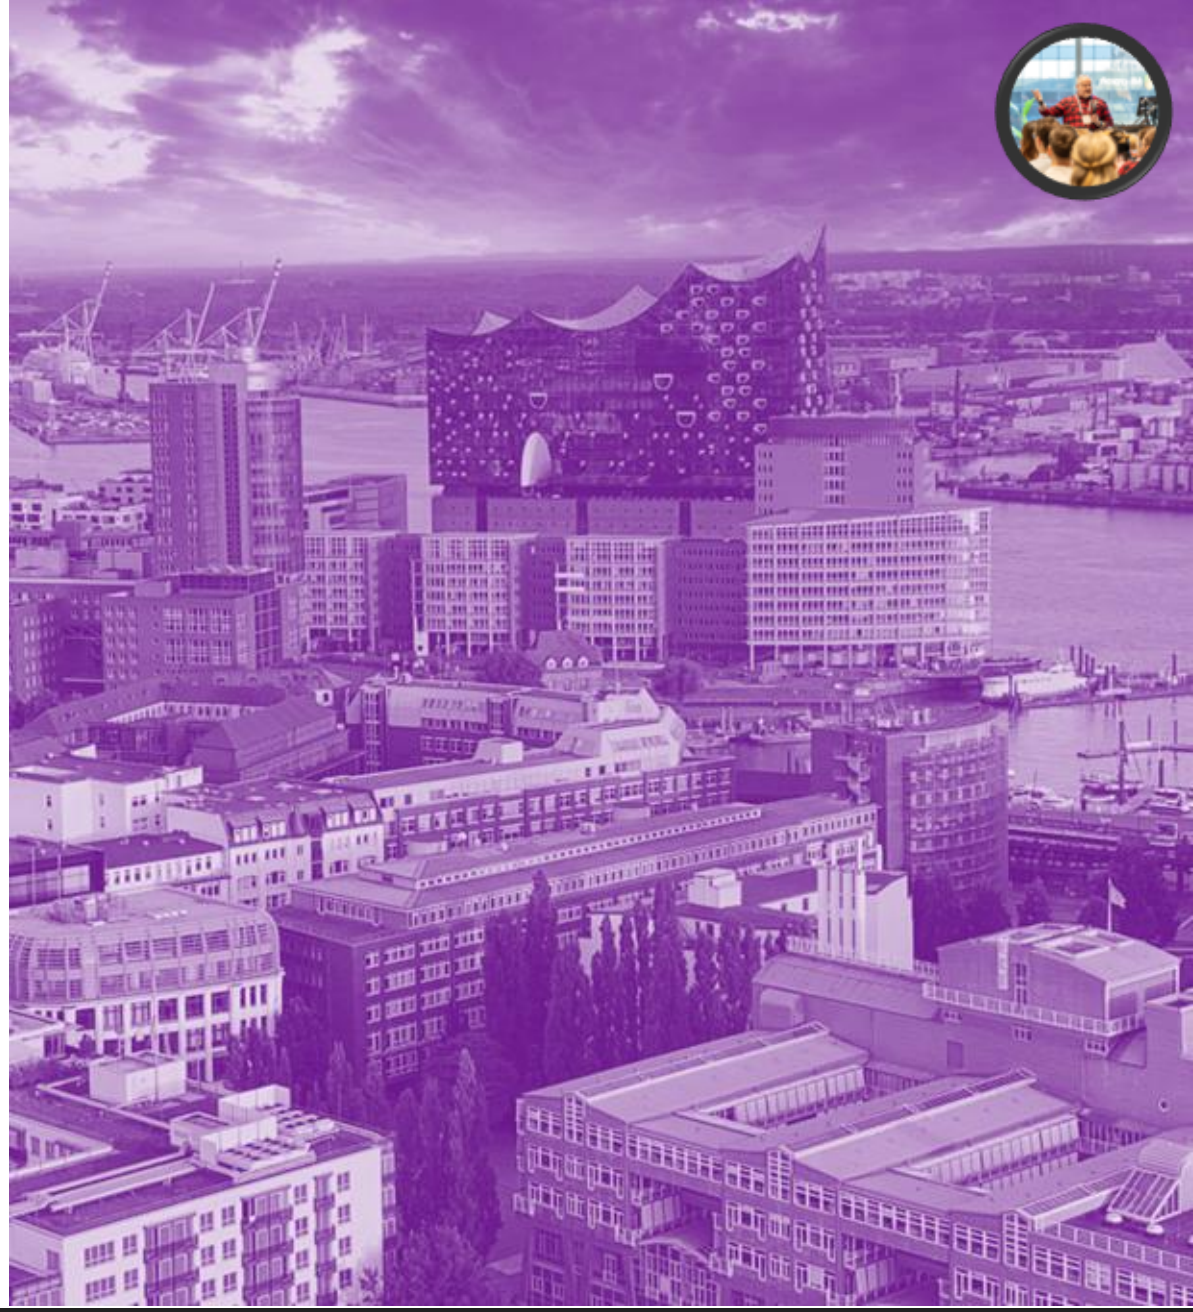
72%

of users prefer content

in their native language.

https://www.languageline.com/blog/cant-read-wont-buy-concept-drives-multicultural-consumers

Why multilingual matters



Power Pages gives you the foundation. Not the house.

You get

- Language selector component
- WebPage Content per language
- Content Snippets structure
- Dataverse language packs

You still need to build

- Actual translation strategy
- Form & list label translations
- RTL layout handling
- AI-powered workflows

Configuring Dataverse & Power Pages for multiple languages

Language configuration flow

Enable Languages in Dataverse

Settings > Languages
EN, FR, DE

Add Website Languages

Portal Management
Map LCID codes

Create WebPage Content Records

One per language
per page

Add Content Snippets

Reusable translated
text blocks

The mental model

WebPage (Container — language-independent URL: /events)

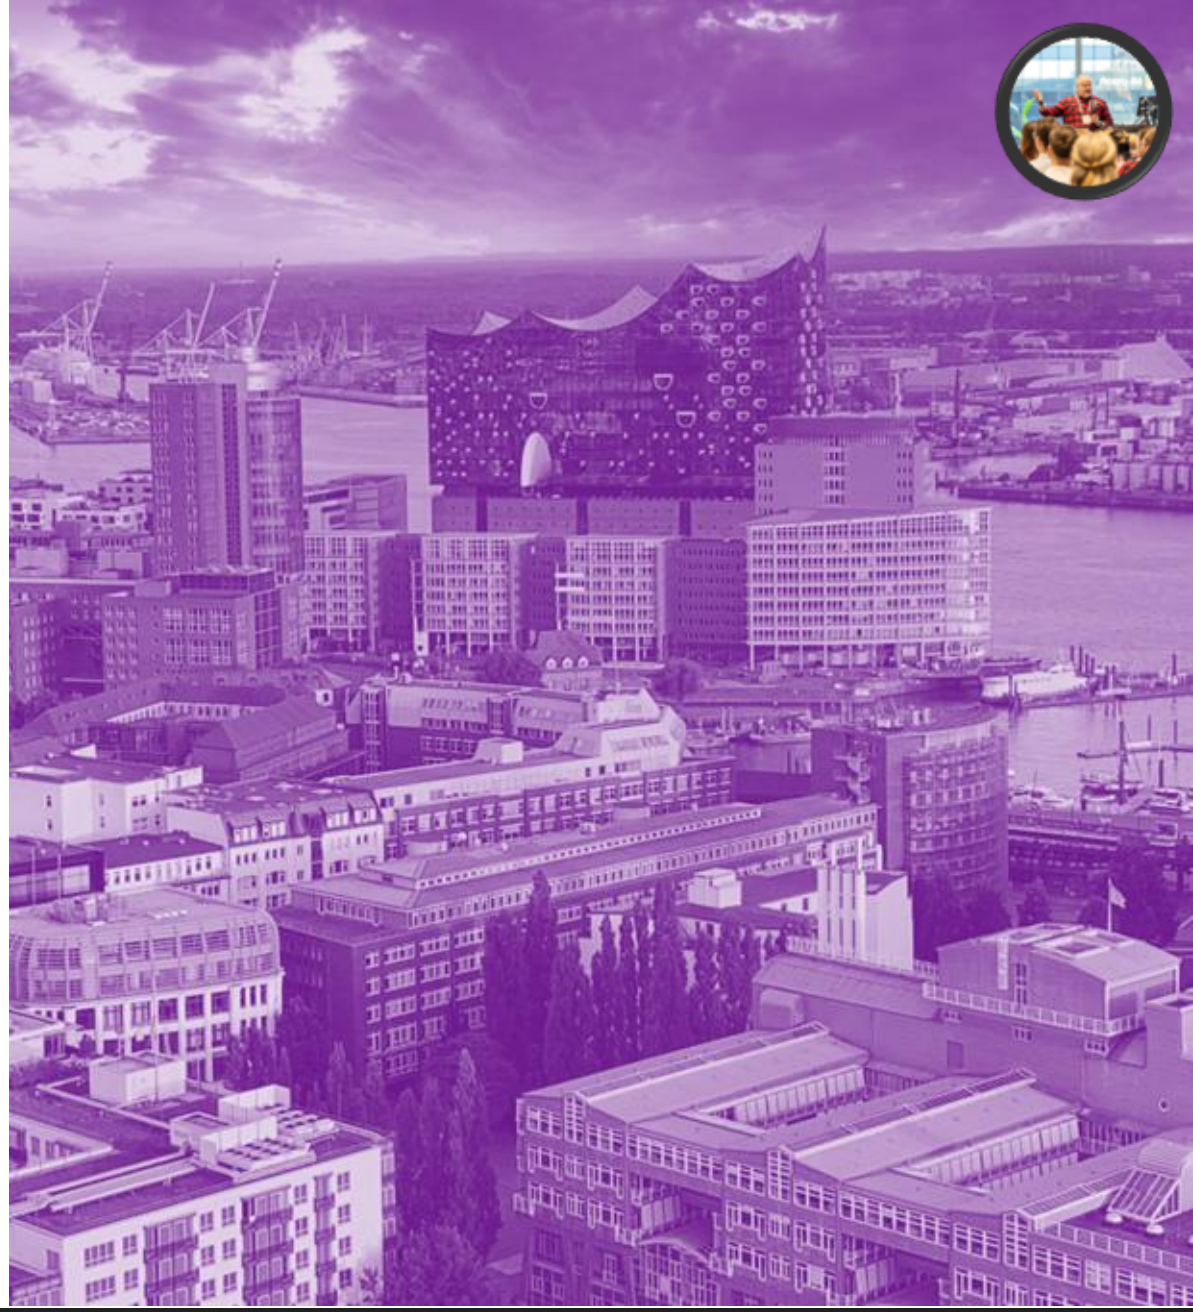
EN	FR	DE
English (Default)	**French**	**German**
WebPage Content	*WebPage Content*	*WebPage Content*
Title: Our Events Copy: Discover...	Title: Nos événements Copy: Découvrez...	Title: Unsere Events Copy: Entdecken...

Content Snippets: Your translation units

Snippet Name	EN	FR	DE
Footer/Copyright	© 2026 Alpine Events	© 2026 Alpine Events	© 2026 Alpine Events
Home/HeroBanner	Discover world-class events	Découvrez nos événements	Entdecken Sie Events
Nav/RegisterLabel	Register Now	Inscrivez-vous	Jetzt registrieren
Reg/SuccessMsg	Thank you! Confirmed.	Merci ! Confirmée.	Danke! Bestätigt.

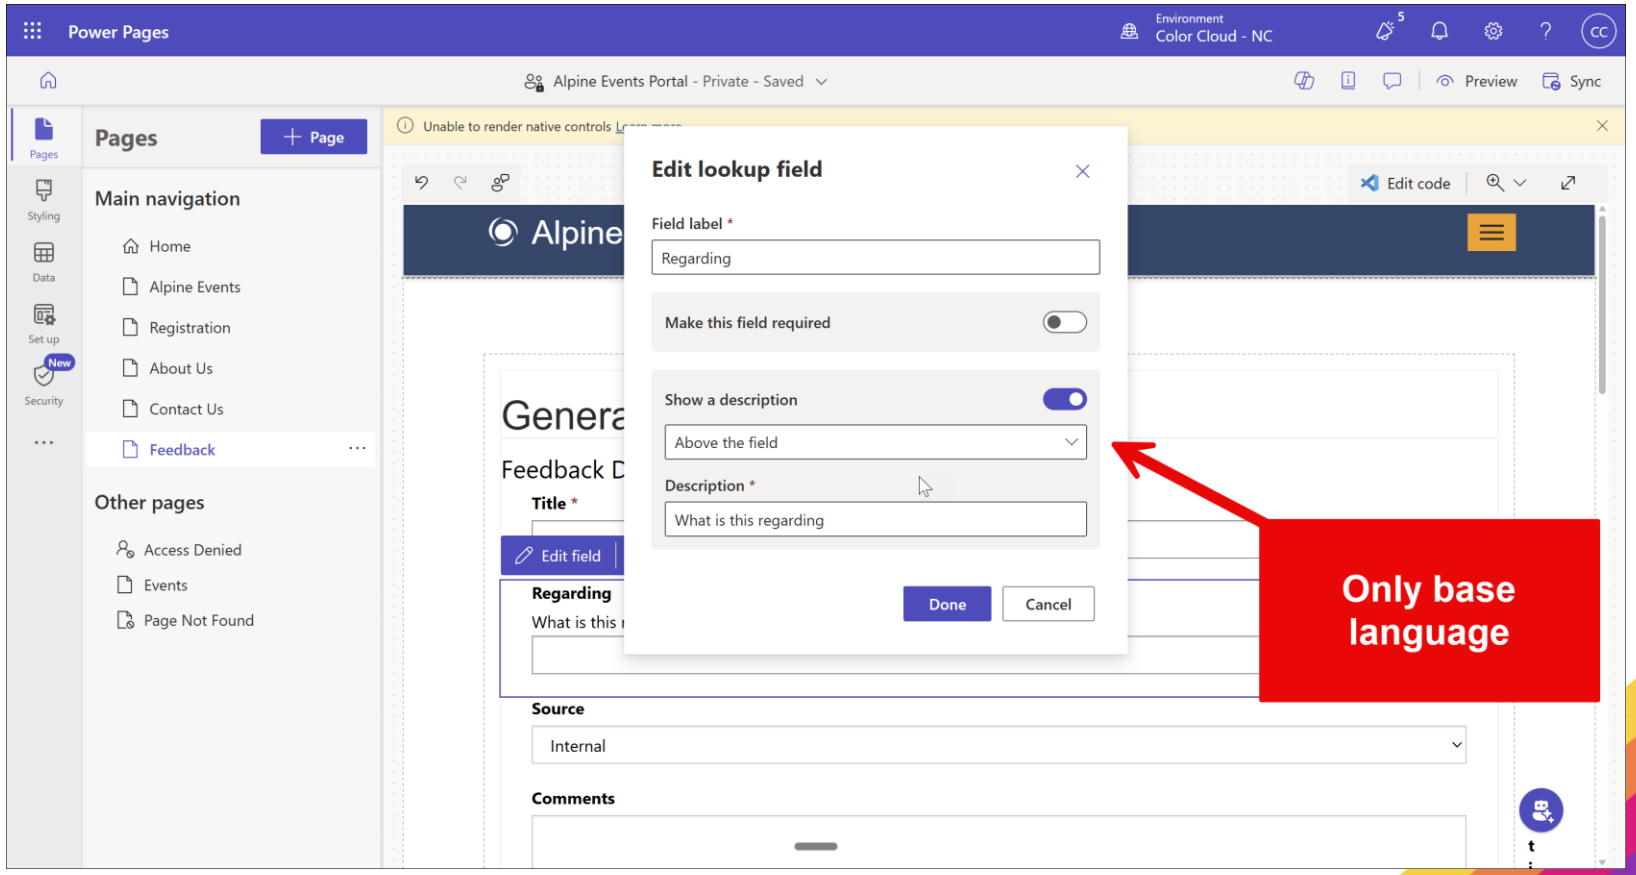
Best Practice: Use Section/Name prefixes for Content Snippets. When you have 200+ snippets, this is the difference between chaos and clarity.

Multilingual forms, lists & dynamic content



Form and list metadata

- Some translations are stored as strings buried in metadata



Form and list metadata

Power Apps | Power Pages Management

Check the site visibility before editing. If the site is set to public, changes made here will be visible immediately. Go to Power Pages to check the visibility of this site. Learn More

Content

Title: Feedback

Copy content

Copy (HTML)

```
1 <div class="row sectionBlockLayout text-left" style="display: flex; flex-wrap: wrap; margin: 0px; min-height: auto; padding: 8px
2   <div class="container" style="display: flex; flex-wrap: wrap;"><div class="col-md-12 columnBlockLayout" style="flex-grow: 1; di
3 </div>
```

Open in VSCode

Translating with XrmToolBox Easy Translator

Connect

Open XrmToolBox
Connect to your Dataverse environment

Select & Export

Easy Translator plugin
Select tables/solution
Export to Excel

Translate

Fill FR, DE columns
Labels, option sets, form sections, views

Import & Verify

Import Excel back via Easy Translator
Refresh portal to check

Why XrmToolBox? Faster than the OOTB export/import. Granular control: select specific tables, filter by solution. Edit labels inline or via Excel. No need to publish all customizations.

Handling RTL & Regional variants

↔️ Right to left

Arabic, Hebrew — the layout flips entirely.
Power Pages doesn't do this automatically.

```
html[lang="ar"] {
  direction: rtl;
}
```

Key principles:

Use CSS logical properties:
margin-inline-start, not margin-left

🌍 Regional Variants

fr-FR vs fr-CH

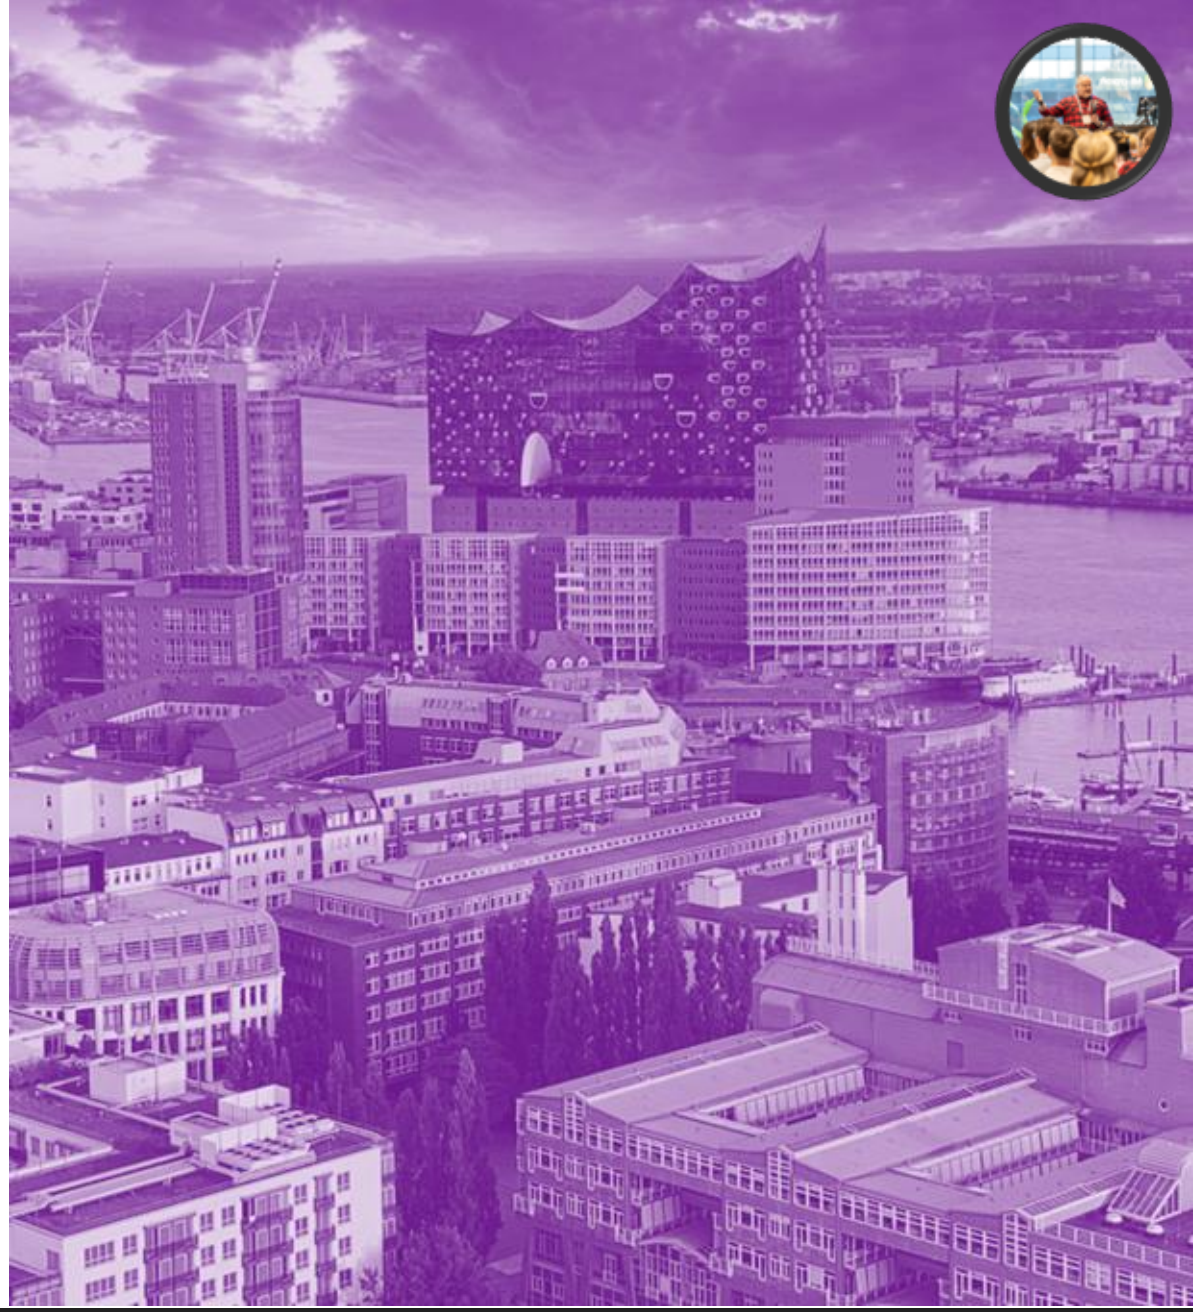
septante vs soixante-dix
EUR vs CHF formatting

Strategy:

Base translation + regional
override table in Dataverse

One portal, smart override layer

AI powered translation with context engineering



Naive Prompt vs. Context-Engineered Prompt

✗ Naive Prompt

"Translate these labels to French: Attendee Name, Email, Dietary Requirements"

Problems:

- Generic terminology
- No length constraints
- No domain context
- Inconsistent across batches

✓ Context-Engineered

✓ **Role:** Swiss event translator

✓ **Context:** Power Pages form labels

✓ **Audience:** Business professionals

✓ **Constraints:** Max 40 chars / label

✓ **Glossary:** Mandatory term mapping

✓ **Output:** Table with char count

XrmToolBox + AI: Translation at scale

80%

done by AI

20%

human review

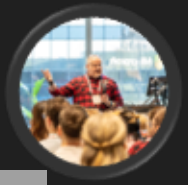
- Export labels via XrmToolBox Easy Translator to Excel
- Feed Excel content to AI with context-engineered prompt
- Paste AI translations back into the Excel file
- Human review: verify terminology, length, context
- Import via XrmToolBox — no Publish All needed

Key takeaways

Key takeaways

- Enable languages in Dataverse FIRST — everything downstream depends on it
- Use Content Snippets with Section/Name convention for all reusable text
- Use XrmToolBox Easy Translator for form labels, option sets & views
- Use context-engineered AI prompts — role, audience, glossary, constraints
- Plan for regional variants from day one
- Maintain a living translation glossary in Dataverse

Don’t start your next international Power Pages project without this checklist!



**“Multilingual is not just translation.
It’s architecture.”**
